BRIEF PRESENTATION

Nowadays, companies of all sizes have access to a huge quantity of data that were never readily available in the past.

Hiring a data scientist is a way to make sense of what these data points mean and turn them into insights that businesses can use in real-world decision-making. Besides, it makes the difference in the way of dealing with business problems.

During my scientific career, I had the opportunity to gain experience in data management, statistics and project and human resources administration as well as in rapidly find answers to any question that comes up. In research, everything spins around data and my intention is to maximize its potential.

I am good team player who enjoys new challenges. I am confident that my scientific background will collaborate to the development of good prediction models for strategic decision-making.

In conclusion, who better to work as a data scientist than a scientist itself?
